

## PRESS RELEASE

# SENER wins the contract to manage upgrades to the command and control technology of the Barcelona Metro

Madrid (Spain), February 2, 2022 - The engineering company [SENER](#) has signed a contract with Infraestructuras.cat to oversee the project that will allow the technologies in the control centers operated by Transports Metropolitans de Barcelona (TMB) to evolve.

This project, which will be carried out over the next 5 years, will require TMB to implement its digital transformation strategy, starting with the most core technological layer, and eventually redefine and optimize its operational processes, structure and capabilities.

The scope of SENER's contract includes everything from normal project management tasks (monitoring the development and execution, financial oversight of the project, and certifications, incident and risk reports, etc.) to a specialized service that involves defining the guidelines applicable to the contractor.

This innovative service to lead and spearhead the technology behind the project will rely on an ad-hoc organizational structure called the "skills center," which will provide the criteria, foundational elements, procedures, methodologies, etc., that must be used by the successful bidder to successfully carry out the work.

With this contract, SENER is confirming its status as a leading player in the field of projects to renovate, develop and upgrade transport infrastructure, which have already begun to be tendered worldwide and which are expected to account for a substantial percentage of the business in coming years.

### **About SENER**

*SENER is a private engineering and technology group founded in 1956, which seeks to offer its clients the most advanced technological solutions and which enjoys international recognition thanks to its independence and its commitment to innovation and quality. SENER has 2,400 professionals on five continents.*

*SENER combines the activities typical of Engineering and Aerospace, and, through the SENER Renewable Investments brand, it has ownership stakes in companies working in power generation.*

*For its part, SENER Engineering has become a global leader in the infrastructure, energy and marine sectors, and SENER Aeroespacial has more than 50 years of experience and is a top-tier space, defense and science supplier.*
